PROFESSIONAL SUMMARY

Software Engineer with 2 years of experience in frontend development using Vue.js and React, along with hands-on backend development using Laravel and Spring Boot. Experienced in building scalable web applications, designing RESTful APIs, and improving system performance.

Strong foundation in Data Structures & Algorithms and system design principles. Additionally, experienced in building AI-driven applications using Retrieval-Augmented Generation (RAG), LangChain, and LLM integrations. Passionate about solving real-world problems through efficient, scalable, and intelligent systems.

Work Experience

Finmkt, Software Engineer

2024/01 – present
Hyderabad

- Designed and integrated RESTful APIs using Laravel, improving API response time by **40%**
- Built and maintained backend business logic, validation layers, and data workflows for production systems
- Developed responsive frontend applications using Vue.js and React, improving UI performance and user experience
- Integrated frontend components with backend services ensuring secure and efficient data exchange
- Worked on event-driven workflow systems (nodes & edges architecture) for dynamic applications
- Implemented authentication using JWT, Laravel Sanctum, and reCAPTCHA
- Optimized performance using lazy loading, caching, and state management techniques
- Collaborated in Agile sprints, participated in code reviews, and followed clean coding practices

Tech Stack: Vue.js, React.js, Vuex, Laravel, Spring Boot, REST APIs, Git, Vite, Postman

Education

Bachelor of Technology in Artificial Intelligence and Data Science,
Seshadri Rao Gudlavalleru Engineering College
CGPA : 9.38/10

2020/08 – 2024/04
Gudlavalleru, 521356

Technical Skills

Languages

JavaScript, TypeScript, Python, Java, SQL, PHP

Core Skills:

Data Structures & Algorithms, OOP, System Design (Basics)

Tools & Practices:

Git, Postman, Cursor, Claude, Lazy Loading

Frontend

Vue.js, React.js, HTML5, CSS3, Tailwind CSS, Sass, Responsive Design

Backend:

Laravel, Spring Boot, REST APIs, MVC Architecture

Projects

Social Media Application, Web Application

- Developed with **React.js, MongoDB**.
- Implemented **state management** with React Context API for smooth data handling.
- Optimized rendering with **lazy loading**, improving page load speed.

Technologies : MongoDB, express js, React js.

Reddit Job AI Bot

- Built a prototype system to extract freelance job posts from Reddit and generate AI-based responses using LLMs
- Implemented **basic RAG pipeline using LangChain** to improve response relevance
- Designed automation workflow using **n8n** for job filtering and response generation
- Integrated **Ollama (local LLM)** for cost-effective AI inference
- Focused on **prompt engineering and workflow automation for real-world use cases**

Tech: Python, LangChain, RAG, n8n, Ollama

GenAI Project: Enterprise RAG-based AI Assistant

- Building an AI-powered internal chatbot to answer questions using private organizational data.
- Implementing Retrieval-Augmented Generation (RAG) using LangChain for contextual and accurate responses.
- Designing document ingestion pipeline with chunking, embeddings, and vector database (ChromaDB).
- Developing role-based access control (RBAC) to restrict data access based on user roles (HR, Finance, Admin).
- Applying guardrails for PII protection and out-of-scope query detection.
- Integrating LLMs (Llama / GPT via Groq/OpenAI) for intelligent response generation.
- Planning deployment and monitoring using evaluation frameworks like RAGAS and LangSmith.

Tech: Python, LangChain, ChromaDB, LLM (Llama/GPT), Groq/OpenAI API, RAG,

Publications

Revolutionizing Malaria Diagnosis: A Deep Learning Approach, *IEEE ICSCSS 2023*

- Presented a novel deep learning model combining VGG19 and ResNet for accurate malaria diagnosis, showcasing expertise in AI and healthcare innovation.

Technology used: Deep Learning Algorithms
